

**IN THE CLAIMS**

1. (Currently Amended) A method of providing location information of a wireless device through a voice announcement comprising:
  - obtaining location information for a caller having a first wireless device from a Gateway Mobile Location Center during establishment of a call to a called party having a second wireless device;
  - providing the location information to an intelligent peripheral[[;]],
    - wherein the intelligent peripheral converts the location information to voice information at the intelligent peripheral;
    - obtaining name information for the caller from a name database,
      - wherein the name database relates wireless device information to name information;
      - providing the name information to the intelligent peripheral,
        - wherein the intelligent peripheral converts the name information to voice information;
    - connecting the intelligent peripheral to the called party's second wireless device through a voice connection[[;]],
      - wherein the intelligent peripheral announces the voice information from the intelligent peripheral to the called party's second wireless device; and
      - forming a connection between connecting the called party and to a calling party.
2. (Cancelled)
3. (Cancelled)
4. (Cancelled)
5. (Currently Amended) The method of claim [[4]]1, further comprising:
  - obtaining the name information using Calling Name Address Presentation (CNAP).

6. (Currently Amended) A method of providing location information of a wireless device through a voice announcement comprising:

obtaining location information for a called party from a Gateway Mobile Location Center during establishment of a call from a caller having a first wireless device to a called party having a second wireless device;

providing the location information to an intelligent peripheral[[;]],

wherein the intelligent peripheral converts the location information to voice information at the intelligent peripheral;

obtaining name information for the called party from a name database,

wherein the name database relates wireless device information to name information;

providing the name information to the intelligent peripheral,

wherein the intelligent peripheral converts the name information to voice information;

connecting the intelligent peripheral to the calling party first wireless device through a voice connection[[;]],

wherein the intelligent peripheral announces the voice information from the intelligent peripheral to [[a]]the calling party second wireless device; and placing a call between connecting the calling party and the called party.

7. (Cancelled)

8. (Cancelled)

9. (Cancelled)

10. (Currently Amended) The method of claim [[9]]6, further comprising:

obtaining the name information using Calling Name Address Presentation (CNAP).

11. (Currently Amended) A network comprising:

a switch;  
a Gateway Mobile Location Center to track the locations of wireless devices that interact with the network; and  
at least one Intelligent Peripheral (IP) coupled to a Mobile Service Center to convert location information for a calling wireless device obtained from the Gateway Mobile Location Center ~~to which tracks~~ locations to a voice announcement, ~~to convert name information for a calling party obtained from a database relating wireless device information to name information to a voice announcement~~, and to interact with the switch to provide the voice announcement to at least one called wireless device over a voice connection; and  
at least one network element to establish a call between the calling wireless device and the called wireless device.

12. (Cancelled)

13. (Cancelled)

14. (Cancelled)

15. (Currently Amended) The network of claim 4~~11~~, the at least one network element to obtain name information further comprising:

a Line Information Database (LIDB).

16. (Currently Amended) A network element comprising:  
a processor;  
at least one port; and  
logic that, when applied to the processor, results in converting location information and name information for a calling wireless device to a voice announcement, and interacting via the at least one port with a switch to provide the announcement to at least one called wireless device during the establishment of a call between the

calling wireless device and the called wireless device, wherein the location information is provided from a Gateway Mobile Location Center, the name information is provided from a database relating wireless device information to name information, and the announcement to the at least one called wireless device is made through a voice connection between the network element and the at least one called wireless device.

17. (Cancelled)
18. (Currently Amended) A network element comprising:  
a processor;  
at least one port; and  
logic that, when applied to the processor, results in the network element becoming involved in the establishment of a call, obtaining via the at least one port location information for a caller from a Gateway Mobile Location Center that provides location information, obtaining via the at least one port name information for a caller from a database relating wireless device information to name information, and providing via the at least one port the location information and name information to a network element that creates a voice announcement of the caller's location and name and delivers the voice announcement to a called wireless device over a voice connection between the network element and the called wireless device.
19. (Cancelled)
20. (Currently Amended) A network element comprising:  
a processor;  
at least one port; and  
logic that, when applied to the processor, results in the network element becoming involved in the establishment of a call, and results in obtaining via the at least one

port location information and name information for a called party from a Gateway Mobile Location Center that provides a name service, and providing via the at least one port the location information and name information to a network element that creates a voice announcement of the name information and the called party's location and delivers the voice announcement to a calling wireless device over a voice connection between the network element and the calling wireless device.

21. (Cancelled)
